

DYNALOGIX 5

Next generation high performance door controller

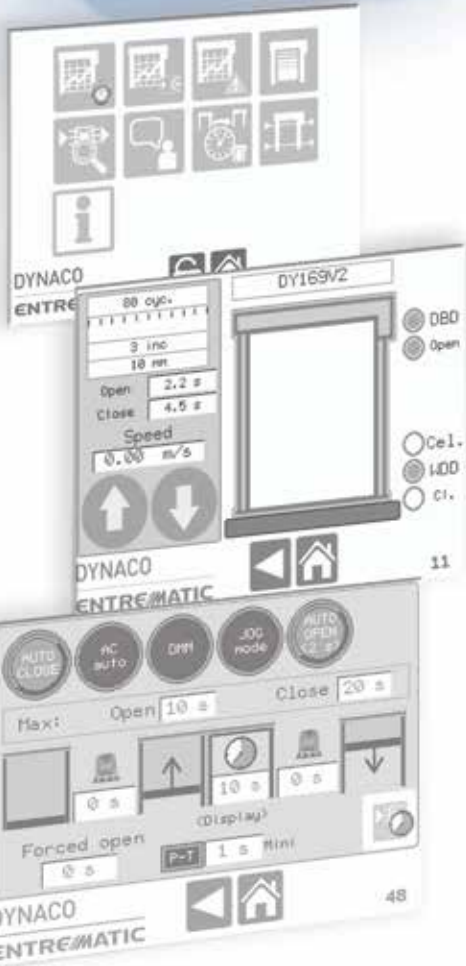

www.dynacodoor.us

Optimized ramps for quickest door cycle

Full color touch screen interface

Smart maintenance alerts

OPTIMIZED RAMPS / QUICKEST CYCLE

The DYNALOGIX 5 uses intelligent ramps to increase the door cycle speed up to 30%, both during opening and closing. The complete cycle is significantly shorter, resulting in time and energy savings.

MAINTENANCE SCHEDULING

Routine maintenance is the best way to ensure that your door meets performance requirements for many years. The DYNALOGIX 5 offers enhanced schedules and alerts to ensure proper inspection & maintenance intervals.

MULTILINGUAL INTERFACE

Personalize the user interface with your choice of: English, French, Spanish, German, Italian and Dutch.

SMART BOTTOM EDGE DETECTION

If the door closes on an obstacle, it will automatically reverse. Next time, the door will slow down at the point where the object was encountered to avoid an impact at full speed.

SMART TIMER OPERATION

The DYNALOGIX 5 continuously registers the operation of the door in order to automatically determine minimal open time.

TOUCH SCREEN

A full color touch screen allows you to verify the status of the door at any moment and make adjustments. The control box can be installed at a distance of up to 10 meters of the screen, for reasons of aesthetics or safety.

SMART LOGS

Detailed logs help the service technician find the root cause of possible anomalies. Thus, intervention time is reduced and the door remains operational as much as possible.
